Profile

AI Engineer with about 2 years building agentic and generative AI systems, and the Python and FastAPI services they run on. Work covers legal RAG, a tool-calling chatbot integrated into a client portal, document AI, and a US-client booking sync. Hands-on with Azure OpenAI, embeddings, reranking, OCR, PostgreSQL, and MongoDB.

Technical Skills

Agentic AI and LLM engineering: Agentic workflows, tool calling, LLM orchestration, prompt engineering, GPT-4, GPT-4o-mini, Azure OpenAI
Generative AI and RAG: Retrieval-augmented generation, embeddings, hybrid search, reranking, grounding, OCR, Document Intelligence
AI search and data stores: Azure AI Search, PostgreSQL, MongoDB, Redis, SQL
Backend engineering: Python, FastAPI, REST APIs, SQLAlchemy, Celery, AsyncIO, JWT, role-based access control
Cloud and DevOps: Microsoft Azure, App Service, Blob Storage, Docker, GitHub Actions, resource migration
API integrations: OAuth 2.0, HMAC webhooks, Salesforce Apex, Microsoft SaaS marketplace, Razorpay, eCourts, Qualtrics, Tripleseat
Languages: Python, SQL, Apex, C++, C, JavaScript, Java

Experience

Software Engineer (AI/Backend) | AIOrdinate — Nov 2025 – Present

Remote

SF Giants – Booking platform | Jun 2026 – Oct 2026

- Led Qualtrics, Salesforce, and Tripleseat automation and cut handling time by **90–95%**. OAuth 2.0, HMAC webhooks, a claim queue, **2-minute** dedup, and HTTP **429** retry. Roughly a **$450–500K** engagement.
- Routed each booking to Prospect, Waitlist, Tentative, or Definite with a **90-day** window, a room-overlap check, and a **48-hour** rule. Account, contact, owner, and manager sync both ways, including Qualtrics and the room catalog.

Caseflow – Legal platform | Nov 2025 – Present

- Lawyer platform from Nov 2025: FastAPI and PostgreSQL, **41** tables and **140+** routes, plus MongoDB. Migrated storage and app services to Azure.
- On the same platform, Document Intelligence, OCR, and Azure OpenAI moved annotation from **75%** to **98%**. LODE extraction reached **96%**. Handwritten page numbers are dropped so the bookmark lands on the heading's page.
- Added **9** eCourt endpoints for CNR lookup, case sync, and court-order PDFs. The captcha is solved with Azure OpenAI vision.

Client portal | Nov 2025 – Present

- Client-facing API from Nov 2025: **60+** JWT routes for signup and password reset, pinned cases, document folders, task comments, calendar, and Rocket.Chat.
- Integrated the LexAIO agent into this portal only. The frontend calls the portal backend, which calls the agent. **13** chatbot routes cover ask, summary, and share-by-email.

LexAIO – Agentic chatbot | Apr 2026 – Present

- Tool-calling agent in its own service. GPT-4o-mini routes the last **5** turns to hybrid search, eCourts, or MasterDB, with **3** retries. GPT-4 answers only from the tool payload.

Precedent search – RAG | Jun 2026 – Oct 2026

- RAG over judgments in India, the US, the UK, and Australia. Returns **4** of the top **20**. A **40** confidence floor hides weak hits. Retries under **0.30** retrieval or **0.35** grounding.
- Listed that search on the Microsoft marketplace as a subscription. Landing, activate, and lifecycle webhooks, then plan quotas. Direct checkout uses Razorpay.

Technologies: Python, FastAPI, PostgreSQL, Celery, Redis, Azure OpenAI, Azure AI Search, Salesforce Apex, Docker, GitHub Actions.

Software Engineer Trainee | Cisco Systems India Pvt Ltd — Nov 2024 – Nov 2025

Bangalore

- Built FastAPI create, read, and update endpoints and PostgreSQL schemas for an internal ops dashboard of device records, configs, and status, with request validation and error handling.
- Wrote the SQL for list and filter screens, added JWT login, and debugged failing endpoints and integration tests in Git reviews with senior engineers.

Technologies: Python, FastAPI, PostgreSQL, SQL, REST, JWT, Git.

Projects

DeepDDI – Drug–Drug Interaction Prediction | IIIT Bhubaneswar, 2024

- Implemented three DrugBank interaction models. A SMILES Conv1D baseline reached **71.3%** accuracy and **0.709** AUC. RDKit graphs, **79** atom features and **10** bond features, lifted graph convolution to **81.0%** accuracy and **0.804** AUC.
- Added Laplacian positional encoding and graph attention. Accuracy moved from **71.3%** to **86.2%**, and AUC from **0.709** to **0.850**, the strongest of the three models.

Technologies: Python, PyTorch, RDKit, graph attention, Conv1D, DrugBank.

Education

IIIT Bhubaneswar — **Dec 2020 – June 2024**
B.Tech, Computer Engineering | CGPA 7.44 / 10 | DSA, OS, DBMS, OOP, Machine Learning

Achievements

- Expert on CodeForces with rating **1610**.
- LeetCode Knight, **500+** DSA problems.
- CCNA. Coursera Supervised Machine Learning.
