

Rajkumar Kishor Ramteke

AI Backend Engineer (Software Engineer) | Python | FastAPI | LLMs

Contact

Bangalore, India | rajkrram09@gmail.com | +91-8007248969

linkedin.com/in/iamrajkumar | github.com/iamrajkumar1 | leetcode.com/u/iamrajkumar

Portfolio: iamrajkumar1.github.io/portfolio

Technical Skills

Languages: Python, C++, C, JavaScript, Java, SQL, Apex

AI / LLM: LangChain, RAG, Azure OpenAI, GPT-4 / GPT-4o-mini, prompt engineering, tool calling, agent orchestration, embeddings, hybrid vector + keyword search, semantic search, Azure AI Search, document parsing, chunking

Backend: FastAPI, REST APIs, AsyncIO, SQLAlchemy, Alembic, Celery, Redis, JWT, RBAC, webhooks, OAuth 2.0, event-driven workflows, background jobs, queues, multi-tenant SaaS

Data / Cloud: PostgreSQL, MongoDB, Redis, Azure Blob Storage, Azure App Service, Docker, Git, Linux, GitHub Actions CI/CD, logging and monitoring

Integrations: Salesforce Apex REST, Tripleseat, Qualtrics, eCourts APIs, Rocket.Chat

Engineering: API design, unit testing, integration testing, debugging, production support, SDLC, code review

Education

International Institute of Information Technology, Bhubaneswar

Dec 2020 – June 2024

B.Tech Computer Engineering | CGPA: 7.44 / 10

Coursework: Data Structures and Algorithms, Operating Systems, DBMS, OOP, Machine Learning

Experience

AI Backend Engineer (Software Engineer)

Nov 2025 – Present

AI Ordinate

Remote

SF Giants Universal Calendar (production)

June 2026 – Present

- Shipped the booking backend to **production** with signed Apex REST webhooks, HMAC verification, and bidirectional Salesforce–Tripleseat Opportunity sync (OAuth, queueable callouts, duplicate detection, HTTP 429 retry, integration logging) so live events stay linked with no open sync errors.
- Migrated Salesforce **Opportunities to Events**, mapping fields plus Account and Contact links so historical bookings kept the correct party, room, and ownership data.
- Built Qualtrics inbound and room-catalog REST APIs that create Salesforce records and route them into Tripleseat without duplicate events.

Tools: Salesforce Apex, REST APIs, OAuth 2.0, signed webhooks, Qualtrics, Tripleseat

Legal case platform and client portal

Nov 2025 – Present

- Own the FastAPI/PostgreSQL/SQLAlchemy backend for a multi-tenant legal SaaS spanning **50+ tables**, including the client-portal APIs for cases, documents, calendar, meetings, and chat (Rocket.Chat), with JWT/RBAC on both lawyer and client portals.
- Built the legal document annotation pipeline (PDF bookmarks, hierarchical indexes, annexure refs) and LODE dated-event extraction with rule-based parsing and fuzzy dedup at an **85%** similarity threshold.
- Ran Celery/Redis/Azure Blob async jobs for large-document processing, meeting invites, and background sync; Docker plus GitHub Actions CI/CD onto Azure.

Tools: Python, FastAPI, PostgreSQL, SQLAlchemy, Alembic, Celery, Redis, Azure Blob, Docker, GitHub Actions, JWT, Rocket.Chat

Multilingual legal chatbot (LexAIO) — backend and agent

April 2026 – Present

- Built the FastAPI chatbot backend and dual-LLM agent pipeline: language routing, tool calling (law dictionary, Azure AI Search / MasterDB, eCourts), RAG with embeddings, hybrid vector+keyword search, OCR/document context, and GPT-4 response generation constrained to retrieved data.
- Deployed the chatbot API to Azure App Service with GitHub Actions; wired it into the client-portal chatbot and chat routes for case-aware, multilingual legal Q&A.

Tools: Python, FastAPI, LangChain, Azure OpenAI, Azure AI Search, RAG, embeddings, hybrid search, tool calling, CI/CD

Software Engineer Trainee

Nov 2024 – Nov 2025

Cisco Systems India Pvt Ltd

Bangalore

- Wrote Python FastAPI REST endpoints and PostgreSQL schemas for an internal ops dashboard used by the team to look up device records, configs, and status — create/read/update APIs, request validation, and error handling.
- Added JWT login on those APIs, wrote SQL for the common list/filter screens, and sat in Git reviews while debugging failing endpoints and integration tests with senior engineers.

Tools: Python, FastAPI, PostgreSQL, REST APIs, JWT, Git

Projects

DeepDDI – Drug–Drug Affinity Prediction

- Designed a deep-learning pipeline with CNN and Graph Neural Networks on molecular graphs to predict drug–drug interactions at **87%** accuracy, using RDKit fingerprints and graph features over **500+** drug molecules.
- Built the feature-extraction and preprocessing path in Python, cutting preprocessing time by **40%**, with train/eval loops and standard ML metrics for model selection.

Achievements

- 500+ DSA problems on LeetCode (Knight) and GeeksforGeeks; CCNA; Coursera Supervised Machine Learning.
